### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Specification*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 5 rejected under 35 U.S.C. 102(e) as being anticipated by Miyamoto (U.S. 6,518,999).

Regarding claim 1, Miyamoto '999 discloses an image pickup apparatus (Fig. 1) comprising:

an image pickup element (Fig. 1, the element 3); a memory for storing an image obtained by said image pickup element (i.e., noted the memory 6 and 12); a signal processing circuit adapted to effect predetermined signal processing (i.e., noted the thin-out process and the comparing of the exposure with the memory 6; see col. 3, lines 35+, col. 6, lines 10+, and col. 7, lines 1-10) on an image read out of a first area of said memory (6); and

Art Unit: 2612

a memory control circuit (i.e., Fig. 1, the elements 13 and 14) adapted to, in a mode of continuously picking up still images (i.e., col. 6, lines 1-50), carry out in parallel a writing operation of writing an image obtained by said image pickup element (i.e., as shown in Fig. 8, the reading and writing of the memory 6 is performed in parallel), into the first area of said memory (6) and a readout operation of reading an image already stored in the first area of said memory (6) to effect said predetermined signal processing by the signal processing circuit (i.e., col. 6, lines 35- col. 8, lines 10).

Regarding claim 5, wherein said signal processing circuit and said memory control circuit are included on a single integrated circuit (i.e., noted that the processing circuit and control circuit are integrated on a single circuit within the camera as shown in Fig. 1).

#### *Allowable Subject Matter*

4. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Wakui '740 shown a camera having a continuous mode of operation.

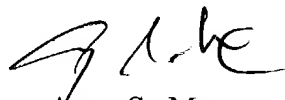

Art Unit: 2612

b. Anderson '028, Anderson '920 and Anderson '214 show a parallel processing within the camera.
